PROJECT PROPOSAL : "ONLINE VOTING SYSTEM"

Using this application voters can use his/her voting right online without any difficulty. He/She has to be registered first for him/her to vote. Registration is mainly done by the system administrator for security reasons. The system Administrator registers the voters on a special site of the system visited by him only by simply filling a registration form to register voters. After registration, the voter is assigned a secret Voter ID with which he/she can use to log into the system and enjoy services provided by the system such as voting. If invalid/wrong details are submitted, then the citizen is not registered to vote.

TECHNOLOGIES: HTML5, CSS, and Javascript for the front end of the website and PHP and MySQL for the backend.
